

WE KEEP YOUR OPERATION RUNNING

IWK Obsolescence Management

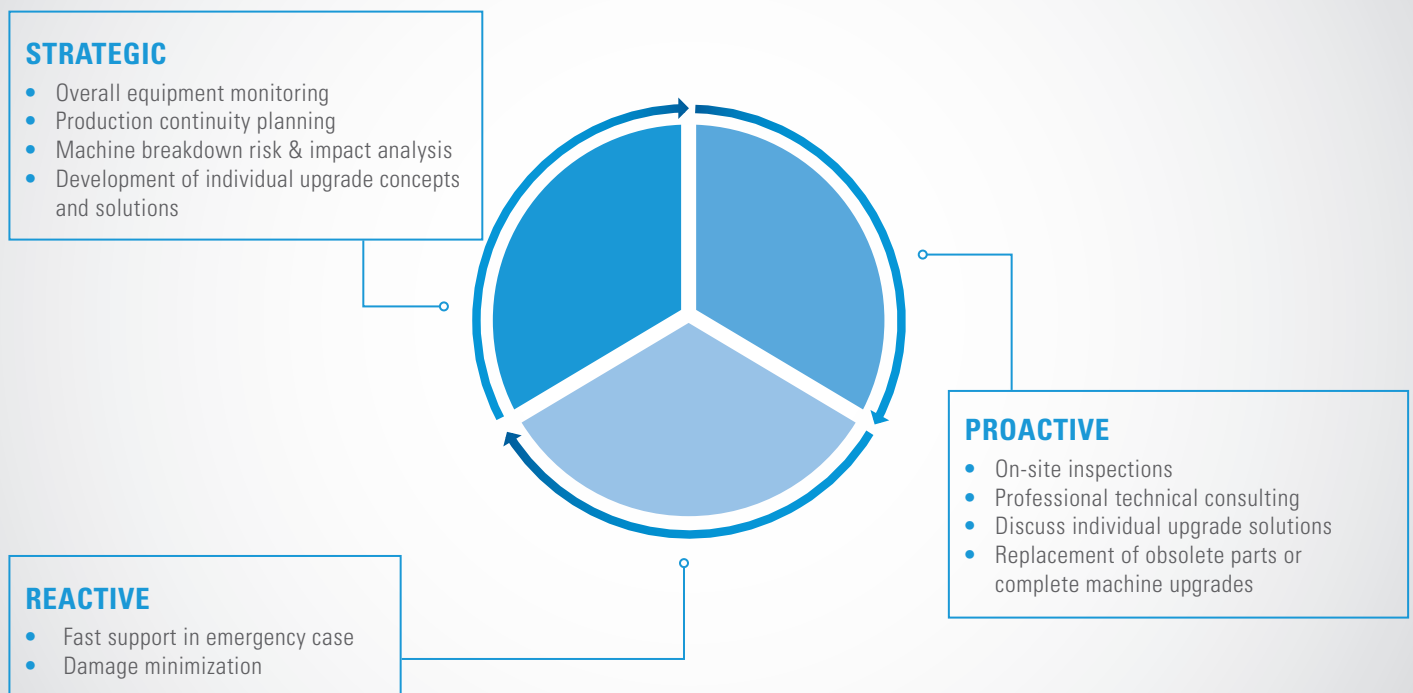

IWK OBSOLESCENCE MANAGEMENT

Support in every phase of machine life

Obsolete machine components bear the risk of unforeseen machine downtime. Spare parts are no longer available, which limits our options to support you.

For this reason we have established the **IWK Obsolescence Management** department. We especially focus on control system conversions and the exchange of obsolete parts. Depending on the application, condition and specification of your machine, we have developed different types of control system conversions. Our team of experienced design engineers in combination with goal-oriented project management and qualified technicians guarantee you first-class service and on time commissioning. Building on the experience of over 100 control system conversions, we have the right solution for your application.

Our approach to obsolete technology: 3 different stages of support

Your roadmap for an electrical upgrade

Your Benefits

- Machine life-time extension
- Minimization of production breakdown risk
- Restoring the availability of spare parts
- Extension of the machine functionality
- Provision of the original manufacturer's documentation
- Full qualification support
